Description:

This is a mIRC version of the "snakes" game, seen on old arcades, and on some newer mobile phones.

Submitted Review | Author's Updates

Pros...

This has popups:) (menubar)

or /snake for the keyboard junkies too.

And difficulty levels that really are difficult:)

a built in check to stop older mIRC's from trying to run it

The information @windows are fixed in size, and on my (standard) windows some of the text was off the edge of the box The gaming area really should be a little bit larger, maybe 1/2 as large again, it felt a little bit cramped.

The unload was a nice idea, but it left some variables behind sadly.

Conclusion...

I like this!

Its an exact replication of snakes on mIRC, with user levels, high score and smooth graphics
